

INSTITUTIONAL ON-CHAIN ALPHA & ALGORITHMIC TRADING INFRASTRUCTURE

daVIRA Intelligence

Building the Next-Generation Quantitative Powerhouse & Crypto Infrastructure from India to the Globe.

THE 4-PHASE EVOLUTIONARY THESIS

Phase 1: Multi-Chain Smart Money & LLM Alpha Tracker → Phase 2: Quantitative Prop Trading Desk
Phase 3: Algorithmic Market Maker ("Wintermute of India") → Phase 4: Global Institutional Quant Cloud

FOUNDER: VIVEK GAUTAM

Ex-GoQuant · QuantInsti Alumnus · Quantitative & Market Analyst at Crypto Firm

Executive Summary: Transparent On-Chain Alpha to Market Making

The Market Shift

DeFi Perp Volume Surge

- Perpetual trading volume is migrating permanently on-chain (\$2B–\$5B/day on Hyperliquid alone).
- Institutional prop desks lack transparent, low-latency intelligence on who is driving market moves.
- Legacy analytics tools offer noisy vanity scores, misleading short covers for buys, and zero execution realism.

Current Traction

Live Working Terminal

- daVIRA V1 is fully built & operating: tracking 2,000+ top wallets on Hyperliquid.
- Proprietary 4-component flow decomposition (New Longs vs Short Covers; New Shorts vs Long Exits).
- Sub-minute position change radar, agreement voting, and execution drag stress tests (0–25 bps).

The Strategic Roadmap

4-Phase Vision

- Phase 1: Global Multi-Chain (Hyperliquid, Solana, Base) + LLM Query Layer ('Everything a prompt away').
- Phase 2: Proprietary Quant Trading Firm exploiting internal flow signals & funding rate basis.
- Phase 3: Algorithmic Market Maker ('The Wintermute of India') providing deep liquidity across DEX/CEX.
- Phase 4: Institutional Quant Infra enabling global prop firms to deploy strategies at 80% lower cost.

The Paradigm Shift: Crypto Liquidity is Moving On-Chain

0

Tier-1 Global Crypto Market Makers in India

The Centralized Exchange Exodus

Opaque Orderbooks → Verifiable On-Chain Fills

- Post-FTX and regulatory crackdowns, institutional and high-volume capital is migrating rapidly to high-throughput on-chain orderbooks like Hyperliquid, dYdX, and Solana DEXs.
- On-chain orderbooks make every trade, position snapshot, and liquidation public—yet 99% of market participants cannot decode the raw event stream in real time.
- Trading firms that capture this order flow have an unprecedented information advantage over traditional retail and slow discretionary funds.

The India Opportunity

World-Class Quant Talent Without Institutional Infrastructure

- India accounts for over 20% of global crypto users and is the world's largest talent exporter in quantitative finance, mathematics, and high-frequency systems.
- Despite this engineering power, India lacks a native institutional powerhouse comparable to Wintermute (UK/SG), Jump Crypto (US), or Flow Traders (NL).
- daVIRA bridges this divide: starting with world-class tracking intelligence and scaling into an institutional prop trading and market making powerhouse based out of India for the globe.

The Institutional Blindspot in Crypto Alpha & Execution

Misleading 'Smart Money' Noise

Fake Signals & Flawed Aggregations

- ✗ Current trackers (Nansen, Arkham) treat every buy equally. A short covering squeeze is mislabeled as aggressive bullish conviction.
- ✗ Single whales splitting orders across 10 wallets fabricate fake 'cohort consensus', luring retail and funds into trap trades.
- ✗ Lack of fee, funding rate, and slippage stress testing creates paper-profitable illusions that fail in live execution.

Complex Query Friction

Alpha Trapped Behind Code & SQL

- ✗ Professional traders waste 4–6 hours daily writing Dune SQL queries or subgraphs just to isolate whale movements.
- ✗ By the time a custom dashboard is compiled, the market move has already occurred. Alpha decays in minutes.
- ✗ No conversational or prompt-driven interface exists to dynamically screen and stress-test on-chain position flows.

Prohibitive Infrastructure Costs

High Barrier for Small & Mid Prop Desks

- ✗ Deploying institutional-grade trading infrastructure (dedicated RPC nodes, colocation, normalized order routing) costs \$25k–\$50k/month.
- ✗ Small and medium prop firms in emerging markets (India, SE Asia) are locked out of high-velocity strategies.
- ✗ Independent quants are forced to use unreliable public endpoints, suffering fatal execution latency and slippage.

daVIRA Intelligence: Mathematical Rigor & Execution Reality

4-Way Flow Decomposition

Isolating Genuine Intent

- ✓ Decomposes every transaction into 4 distinct vectors: New Long, Short Cover, New Short, and Long Exit.
- ✓ Instantly differentiates aggressive new directional leverage from passive risk reduction.
- ✓ Eliminates false breakout traps.

Anti-Spoofing Radar

One-Wallet, One-Vote

- ✓ Removes the largest contributor to test whether apparent consensus is driven by a single whale or genuine multi-desk buying.
- ✓ Detects wallet clustering and internal wash-positioning.
- ✓ Gives pure, unmanipulated directional conviction.

Front-Running & Early Signals

Sub-Minute Delta Alerts

- ✓ Monitors 2,000+ top-tier profitable wallets for balance and position delta shifts.
- ✓ Alerts on abnormal accumulation minutes before major breakouts or scheduled macro releases (FOMC/CPI).
- ✓ Historical win-rate tracking per individual coin.

Copyability Stress-Testing

Execution-Adjusted Metrics

- ✓ Applies 0 / 5 / 10 / 25 bps slippage and taker fee stress testing on every wallet.
- ✓ Calculates median holding time and maker/taker ratio.
- ✓ Filters out HFT scalpers that cannot be followed, surfacing reproducible swing alpha.

Live Working V1: Validated Quantitative Architecture

2,000+

Indexed Leaderboard Wallets

< 60s

Sub-Minute Position Delta Tracking

2,000 Fills

Flat-to-Flat Episode Reconstructed

0 Leakage

Local-First Architecture / Zero Key Risk

Core Analytics Engine (Implemented)

Production-ready local-first terminal

- Smart-Money Desk: Real-time net exposure across 40 top profitable accounts + 20 custom watchlist addresses.
- Heavy Wallet Screener: Full filtering by 30D net PnL, profit factor, drawdown control, closed-episode count, and holding time.
- Early Position Radar: Real-time alerts when tracked wallets shift exposure before high-volatility events.

Execution & Risk Stress (Implemented)

Institutional safeguards & validation

- Cross-Venue Comparison: Live basis comparison between Hyperliquid USD perps and Bybit USDT perps.
- Paper Simulation Engine: Realistic simulation with 4.5 bps taker fees, 5 bps slippage, leverage constraints, and persisted journal.
- RWA & Macro Calendar: Integrated BLS inflation releases, verified FOMC calendar, and equity/commodity perp flows.

The Secret Weapon: Everything Just a Prompt Away

Natural Language to Institutional Alpha

No complex SQL queries, no Dune dashboards, no waiting—conversational on-chain discovery.

daVIRA bridges fine-tuned reasoning LLMs directly to our live on-chain WebSocket and SQLite transaction ledger. Institutional analysts query complex multi-chain order flows in plain English and receive instant actionable breakdowns.

PROMPT: ACCUMULATION RADAR

"Show me all wallets with >70% win rate over 60 days that just opened >\$500k long exposure on SOL in the last 20 minutes."

Action: daVIRA returns 3 specific wallets, shows their net long notional (\$2.4M), confirms zero short covering, and plots their entry price vs. current order book depth.

PROMPT: EVENT POSITIONING

"Deconstruct the rally in BTC ahead of tomorrow's CPI release. Is this organic spot, aggressive perp leverage, or short covering?"

Action: daVIRA computes the 4-way flow decomposition: reveals 68% was short covering (exit flow) rather than fresh aggressive longs, warning against chasing the breakout.

PROMPT: STRATEGY STRESS-TEST

"Find top 5 momentum traders in RWA derivatives whose returns remain positive after 15 bps slippage and funding fee drag."

Action: daVIRA executes an instant backtest across 2,000 flat-to-flat episodes, eliminates 8 unprofitable scalpers, and delivers 3 copyable systematic traders.

The 4-Phase Master Roadmap: From Signal to Infrastructure

PHASE 1

Global Crypto Tracker & LLM

Now - Q4 2026

- Multi-chain expansion: Hyperliquid, Solana, Arbitrum, Base.
- Real-time wallet balance & position change ledger.
- LLM conversational natural-language terminal.
- B2B SaaS to global prop desks & pro traders.

PHASE 2

daVIRA Capital (Prop Desk)

2027

- Deploy in-house proprietary trading desk.
- Systematically trade our own flow signals & wallet consensus.
- Harvest funding rate basis arbitrage & cross-venue mispricings.
- Build proven trading track record & compounding balance sheet.

PHASE 3

The Wintermute of India

2027 - 2028

- Launch Algorithmic Market Making (AMM) arm.
- Two-sided automated liquidity provision on DEXs & CEXs.
- Strategic liquidity partnerships with top protocols & tokens.
- Institutional delta-neutral inventory & quoting engines.

PHASE 4

Institutional Quant Infra

2028+

- Open low-latency cloud infrastructure to global prop firms.
- Normalized execution routing, order gateways & colocation.
- Democratize quant strategy deployment at 80% lower cost.
- Become the AWS + Jump Trading rails for emerging market quants.

Phase 1 & Phase 2: Intelligence to Direct Alpha Capture

Phase 1: Multi-Chain Intelligence & LLM Copilot

Terminal Product: Scaling Global B2B Adoption

- ✓ Cross-Chain Data Pipeline: Expanding beyond Hyperliquid to ingest high-frequency transaction logs across Solana, Arbitrum, Base, and Ethereum L1.
- ✓ Dynamic Wallet Clustering: Real-time identification of split wallets and coordinated trading rings using machine learning heuristics.
- ✓ Conversational Alpha: Institutional users query real-time market sentiment, exposure deltas, and whale movements with natural language prompts.
- ✓ B2B SaaS Monetization: Institutional seats (\$999/mo) and API data streams for global prop trading desks, family offices, and quantitative funds.

Phase 2: daVIRA Capital (Proprietary Trading)

Direct Alpha: Trading Market Inefficiencies

- ✓ Proprietary Signal Execution: Capitalizing on our proprietary flow data rather than just selling it—trading verified whale consensus with millisecond execution.
- ✓ Funding Rate & Basis Arbitrage: Systematic delta-neutral strategies capturing persistent annualized funding rate premiums (15–40% APY) across DEXs and CEXs.
- ✓ Statistical Pattern Recognition: Exploiting recurring microstructural inefficiencies, liquidation cascades, and post-news order imbalances.
- ✓ Balance Sheet Compounding: Reinvesting proprietary trading profits to scale internal AUM and fund high-capacity market making infrastructure.

Phase 3 & Phase 4: Building the Wintermute & AWS of India

Phase 3: Algorithmic Market Maker ("Wintermute of India")

Liquidity Provision & Protocol Partnerships

- ✓ The Wintermute Vision: Wintermute achieved \$1B+ in cumulative trading volume and institutional dominance by building low-latency quoting engines in Europe. daVIRA is building India's flagship market maker.
- ✓ High-Frequency Quoting: Continuous two-sided liquidity provision on Hyperliquid, Uniswap v3/v4, Raydium, Aerodrome, and Tier-1 CEXs (Binance, Bybit).
- ✓ Delta-Neutral Inventory Management: Dynamic hedging models protecting liquidity pools from toxic adverse selection and directional market shocks.
- ✓ Protocol Liquidity Retainers: Partnering directly with high-growth L1/L2 foundations and DeFi protocols to ensure tight bid-ask spreads for their tokens.

Phase 4: Institutional Quant Infrastructure Provider

Democratizing Global Quant Execution at Scale

- ✓ Infrastructure as a Service (IaaS): Providing prop firms, family offices, and independent quants with institutional execution rails at 80% lower cost.
- ✓ Ultra Low-Latency Cloud: Pre-configured colocation, direct validator RPC connections, and normalized order execution gateways across 10+ chains.
- ✓ Zero-Friction Strategy Deployment: Quants write Python or Rust strategies and deploy instantly onto daVIRA's institutional execution sandbox without managing nodes.
- ✓ Transaction Routing Monetization: Earning high-margin recurring SaaS fees plus fractional basis points on all transaction volume routed through our rails.

Expanding Across High-Value Financial Markets

Phase 1: Analytics

\$1.8B TAM

Global crypto market intelligence, pro terminals (Nansen, Arkham), and on-chain hedge fund data feeds.

Strategic Edge:

- First terminal with 4-way flow decomposition & LLM prompt queries.

Phase 2: Prop Trading

\$10B+ Profit Pool

Systematic crypto prop trading, statistical arbitrage, and funding rate harvest across global markets.

Strategic Edge:

- Trade our own high-velocity proprietary signals with internal capital.

Phase 3: Market Making

\$15B+ Revenue Pool

Two-sided liquidity provision, CEX/DEX spread capture, and protocol token liquidity retainers.

Strategic Edge:

- First institutional market maker built from India's quant engineering talent.

Phase 4: Quant Infra

\$25B+ Cloud & Rails

Institutional connectivity, low-latency node networks, and normalized trading infrastructure.

Strategic Edge:

- 80% lower cost vs. Western enterprise solutions (CoinRoutes/Talos).

Why daVIRA Outpaces Existing Market Players

FEATURE / CAPABILITY	NANSEN / ARKHAM	HYPERDASH	WINTERMUTE	daVIRA INTELLIGENCE
Data Transparency	Aggregated black-box scores	Basic wallet stats	Proprietary internal only	Full execution proof & attribution
Flow Decomposition	✗ Misidentifies short covering	✗ Unfiltered raw fills	N/A (Trader only)	✓ 4-vector entry/exit split
Natural Language / LLM	✗ Basic filters only	✗ Static UI tables	✗ Internal tools only	✓ 'Everything just a prompt away'
Execution Cost Stress	✗ Assumes 0 fee / 0 slippage	✗ Paper stats only	N/A	✓ 0-25 bps fee & slippage stress
Proprietary Trading Arm	✗ Software vendor only	✗ Analytics only	✓ High-frequency desk	✓ Phase 2 Prop Trading Desk
Market Making Rails	✗ None	✗ None	✓ Tier-1 Global MM	✓ Phase 3 'Wintermute of India'
Developer Infra Cost	N/A	N/A	Closed proprietary	✓ Phase 4 Low-Cost Quant Cloud

Diversified Revenue Model Across Evolutionary Phases

Phase 1: SaaS & Terminal

High-Margin Recurring Revenue

- Pro Analyst Tier: \$99/month for active discretionary traders and independent quants.
- Desk / Institutional Tier: \$999/month per seat with custom webhooks, LLM prompt quota, and dedicated WebSocket feeds.
- Enterprise Multi-Chain API: \$2,500+/month for quantitative hedge funds and algorithmic desks.

Phase 2 & 3: Trading & MM

High-Capacity Alpha Compounding

- Proprietary Trading Returns: Direct alpha generation exploiting internal flow leads and funding rate arbitrage (targeting Sharpe > 3.0).
- Market Making Bid-Ask Spread: Capturing 2–8 bps on hundreds of millions in daily quoting volume.
- Token Foundation Retainers: Recurring retainers (\$15k–\$40k/month per token) for guaranteed orderbook liquidity depth.

Phase 4: Quant Infra SaaS

Volume & Infrastructure Monetization

- Infrastructure Cloud Seats: \$499–\$1,999/month for managed low-latency node clusters and strategy execution environments.
- Volume Routing Fees: 0.2 to 0.5 basis points on institutional transaction volume executed through daVIRA execution gateways.
- Backtesting & Co-location Add-ons: Premium compute for massive tick-data historical replays.

High-Throughput, Low-Latency Quantitative Architecture

01 / Ingestion Layer

Direct Validator & WebSocket Feeds

- ✓ Sub-second event stream from Hyperliquid L1, Solana Geyser, and EVM RPCs.
- ✓ Deduplication by (block, coin, trade_id) with microsecond timestamping.
- ✓ Continuous buffer handling 100,000+ trades without backpressure.

02 / Processing & Analytics Engine

Deterministic Mathematical Core

- ✓ Node.js 24 + SQLite WAL mode engine with Decimal.js zero-floating-point drift.
- ✓ Flat-to-flat episode reconstruction across 2,000 historical fills per wallet.
- ✓ Continuous calculation of Profit Factor, Drawdown, and Agreement Index.

03 / LLM Intelligence & Semantic Agent

Conversational Alpha Gateway

- ✓ Semantic router converting natural language queries into schema-optimized SQL.
- ✓ Zero-shot automated market narrative generation and risk stress testing.
- ✓ Direct webhook push notifications to Telegram, Discord, and internal OMS.

04 / Low-Latency Execution Rails

Institutional Order Routing

- ✓ Ultra-low latency non-custodial execution engine with sub-5ms routing.
- ✓ Automated slippage, fee, and leverage guardrails protecting against liquidation.
- ✓ Modular architecture designed for institutional multi-chain colocation.

Founder: Vivek Gautam — Deep Quantitative & Crypto Pedigree

Vivek Gautam

Founder & Lead Quantitative Architect

- Ex-GoQuant: Worked at the forefront of institutional crypto market data, normalized order routing, and low-latency infrastructure connecting institutions to crypto venues.
- QuantInsti: Formally trained in algorithmic and quantitative finance, financial engineering, econometric modeling, and high-frequency trading systems.
- Quantitative Analyst at Leading Crypto Firm: Currently actively analyzing crypto market microstructure, derivative flows, on-chain dynamics, and trading inefficiencies.
- Hands-On Full-Stack Systems Builder: Personally architected and engineered the entire daVIRA terminal, WebSocket stream listeners, and quantitative screener algorithms.

Why This Team Wins

The Perfect Convergence of Market Knowledge & Tech Execution

- Domain Depth Over Hype: Deep understanding of crypto market microstructure, perpetual swaps, funding rate mechanics, and order book mechanics.
- Already Built, Not a Slide Dream: Unlike typical pitch decks asking for money to write the first line of code, daVIRA has an operational V1 terminal indexing thousands of wallets right now.
- The India Moat: Access to premier IIT/NIT mathematical, quantitative, and systems engineering talent at a 75% cost advantage over Western competitors.
- Relentless Long-Term Vision: Clear, methodical execution trajectory transitioning from high-margin software intelligence into a multi-billion dollar market maker.

Capital Deployment, Strategic Milestones & Vision

Strategic Capital Deployment

Seed / Incubation Round with DIC & Strategic Investors

- 45% Engineering & Quantitative Systems: Hiring elite Rust/Node systems engineers, protocol indexing specialists, and quantitative researchers.
- 25% High-Throughput Node Infra & LLM Compute: Deploying dedicated validator RPC nodes (Solana, Hyperliquid, Base) and fine-tuned LLM inference clusters.
- 20% Prop Trading & Market Making Sandbox: Working capital reserve and initial liquidity pool for testing delta-neutral quoting and flow-signal execution.
- 10% Legal, Compliance & Global Structuring: Regulatory licensing, GIFT City / international corporate structuring, and institutional compliance frameworks.

18-Month Execution Roadmap

Disciplined Milestones & Accountability

- ✓ M1 – M3: Multi-Chain & LLM Alpha Launch
Expand tracker to Solana & Arbitrum; launch the conversational natural language 'Everything a prompt away' interface.
- ✓ M4 – M6: Institutional Prop Desk Pilot
Onboard 50+ global prop desks and quant funds on daVIRA Terminal; reach \$100k MRR across SaaS & API seats.
- ✓ M7 – M12: daVIRA Capital (Prop Desk Launch)
Deploy internal systematic trading strategies exploiting our own flow leads and funding rate basis arbitrage.
- ✓ M13 – M18: Algorithmic Market Making Rollout
Launch automated quoting engine across Hyperliquid & top DEXs ('Wintermute of India'); open low-cost quant infra to early partners.
